DIFFERENCE BETWEEN GLASS & LEXAN® POLYCARBONATE

GLASS

- · Glass is standard with straight corners.
- Glass is standard tempered glass with standard iron content. Request samples from literature center.
- · Glass can be cleaned with most common cleaning materials already found in janitorial supplies.
- · 1/4" Glass weighs 2.88 lbs per square foot.
- · 3/8" Glass weighs 4.32 lbs per square foot.

LEXAN® POLYCARBONATE

- · Polycarbonate/Lexan screens are standard with rounded corners and are clear.
- Polycarbonate has specific chemicals that should NOT be used when cleaning (please refer to the Cleaning and Maintenance Guide online).
- · 1/4" Lexan weighs 1.44 lbs per square foot.
- · 3/8" Lexan weighs 2.88 lbs per square foot.
- · Do not confuse Lexan polycarbonate with Plexi or Plexiglass. There are important differences.
 - Lexan polycarbonate is 200x stronger than plexiglass and is building-code friendly. (Note: local code compliance is the responsibility of the dealer and customer.)
 - Plexi or plexiglass is made of acrylic and does not meet NFPA fire testing requirements. We not use plexiglass on any of our screens.
 - Plexi or plexiglass is very rigid and cracks easier than Lexan polycarbonate.
